

Run your field teams from one system.

One platform for more reliable inspections, audits, field work, compliance, maintenance, and AI-powered reporting.

Capture it. Verify it. Act on it.

What it replaces

Most field operations are not missing software. They are running on six things that do not talk to each other, and the cost is paid at the end of every month.

- Updates arriving as WhatsApp messages
- Paper forms that reach the office days later, if at all
- Excel spreadsheets, re-keyed by hand and version-forked
- Visits nobody can prove actually happened
- Photos scattered across a dozen personal phones
- Hours spent compiling a report that is stale on arrival

How it works

1. Capture

Field teams complete forms on Android or iOS – with GPS, photos, signatures and barcode scans – whether or not there is a signal.

2. Verify

Location-stamped check-ins, geofencing and in-form photo capture mean a record carries its own evidence rather than a claim.

3. Act

Dashboards, scheduled reports and plain-language questions turn the day's submissions into something a manager can act on.

Why Raios360

Give every manager exactly the visibility they need.

162 configurable permission combinations

Capture whatever the job actually requires.

50 form field types, including GPS, photo, signature and barcode

Switch on only the parts your team uses.

16 admin-toggled modules

Ask your own data a question in plain English.

26 AI tools, bounded by the asking user's permissions

Offline-first field operation

Forms, photos, GPS and signatures capture with no signal and sync themselves when it returns. Built for spotty data and low-end Android. "Works offline" is the most over-claimed phrase in this market, so here is specifically what that means:

The reference photos come with you

Images attached to a form are downloaded during sync and cached on the device, so a worker can compare against the standard in a stockroom with no bars.

You can see what hasn't synced

An openable sync queue, with retry or discard per operation, and failed items shown apart from pending ones — so the badge never quietly under-reports.

It never gets stuck offline

Connectivity is re-checked every ten seconds and again whenever the app is reopened, so a stale offline state can't lock someone out of syncing.

Evidence, not assertions

- Check-in is location-stamped, with geofencing enforced at the visit, the form and any unplanned visit.
- Checkpoints, assets and products scanned in place rather than typed from memory.
- Photos captured in the form, at the moment, and carried with the submission rather than sitting on a phone.
- Missed visits, a device gone quiet while clocked in, and over-long shifts are flagged without anyone asking.

Identity capture reads a document. It does not perform facial recognition or biometric matching, and does not verify that the bearer is the person named.

Turn field data into decisions

Raios360 drafts the report, flags the anomaly on a schedule, and answers plain-language questions about your own data — bounded by each user's permissions, so the assistant can never surface a record the person asking could not already open.

"Summarize today's 147 inspections."

- The most common issue was missing expiry dates on chilled stock — 9 of the 15.
- Two branches account for half of all failures.

"Which region has the highest failure rate this month?"

- Central Luzon — 8.7%, 2.1× higher than the company average.
- Driven by two distributors that started in March.

Isolation, control and what it costs

- Strict tenant isolation enforced at six independent layers, custom roles, a full audit trail, and recovery you can defend to a board or an auditor.

- Start on your industry’s templates, toggle the modules you use, import clients and products from CSV. No custom software project required.

16	30 days	\$18	\$180
industry packages	free trial, self-service	per seat / month (USD)	per seat / year (USD)

Raios360 does not hold its own SOC 2 or ISO 27001 certification; the Google Cloud infrastructure underneath is certified. Authorised staff can reach customer data to provide support, and every such access is audited.

Keeps your teams close, to the people you serve

Start a free 30-day trial at raios360.com — self-service and full-featured, no sales call required.
